# Survey: Reuse of Treated Industrial Water and Bio-solids

30Jun2019

- All Day
- [College of Science and Engineering](#)

A survey is being conducted by Hamad Bin Khalifa University and the Abdullah Bin Hamad Al-Attiyah International Foundation for Energy and Sustainable Development, which will offer insight into public acceptance towards reusing treated industrial water and bio-solids from the oil and gas industries for everyday applications.

The use of treated industrial water (highly purified water from industrial processes) and bio-solids (treated organic by-products of the wastewater treatment process that can be used to condition soils), could provide significant environmental benefits.

Help us understand public acceptance.

Undertake the longer version of the survey for a chance to receive a complimentary 2-night stay at the Sheraton Hotel, Doha.
